

Introduction to Python - Matplotlib Spec

OBJECTIVE: This lab was designed to teach you how to import the Matplotlib library and using its properties to plot graphs.

BACKGROUND: An Library is a collection of various and extensive functions and methods that allows you to reuse in your own code without having to rewrite the methods used in the library.

SPEC: Create a program that will create and print a graph with points, axis with titles, and a title for the graph.

- You will need to import the Matplotlib library
- import matplotlib.pyplot as plt
